

Breathing Easier... Has Never Been Better! Your Quality of Working, in Your Facility... Will Be Better!

Indoor Air Quality (IAQ)

A Major Concern and a defining need for Decontamination & Sanitize Services...

People spend the majority of their times now inside of buildings. The Environmental Protection Agency (EPA) warns that the breathable air inside buildings could be up to five times more polluted than the adjacent air outside. The EPA has listed indoor air quality (IAQ) as one of the [top five environmental health risks today!](#) It's a dirty world we're living in, often our germiest encounters come unexpected!

Health Risks from Microbial Contaminates

Industrial/Manufactural Work Environments should be free from these Microbes...

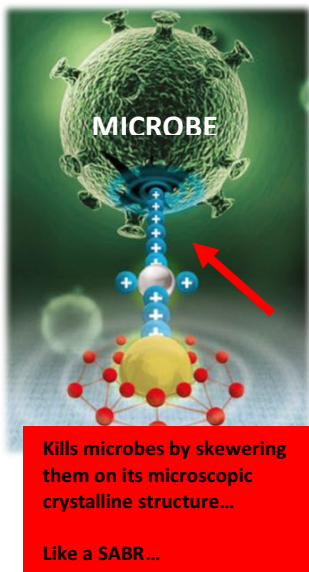

Everyday we're exposed to dangerous micro-organisms and other contaminants passed from individuals, doors, walls, computers, and work equipment, as well as, through the Heating Ventilation and Air Conditioning (HVAC) system. These include viruses, bacteria, mold, mildew, allergens, and unpleasant odors (VOCs). Germs (microbes) can lurk on any surface, from your desk to the spigot on the water fountain, including restrooms are ideal places for bacteria and fungi to thrive, and unpleasant odors (VOCs) volatile organic compounds. "You're always gambling with germs," said Dr. Charles Gerba, professor in the department of soil, water and environmental science at the University of Arizona. "[The thing is to make the odds in your favor.](#)" We offer Goldshield® technologies that can help address these problems; Goldshield 24 is a patent pending non-alcohol hand sanitizer that last many hours longer than alcohol which evaporates 10 seconds after application leaving no protection. GS 24 helps mitigate the broad spectrum of microbes found on sports equipment and surfaces. For hard surfaces we introduce Goldshield® 75 a patented technology with long term residual protection against bacteria and fungi such as mold and mildew. It's also highly effective in eliminating odors... Some of these odors (VOCs) are only annoying, others can make you very sick!

What is a Microbe?

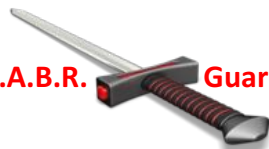

<my-crobe> They are Everywhere...

Microbes are a single-cell organisms so tiny that millions can fit into the eye of a needle!

At any given time, YOUR hands become a microbial habitat that outnumber the people on the entire planet!

What is S.A.B.R. Guard™?

- S. Systematic
- A. Approach to
- B. Biological
- R. Remediation

One of the central key ingredients in Goldshield 75/5 is a patented chemical product that is the first surface penetrating, water-stable, non-leaching application of technology proven effective against bacteria that cause odor, staining and discoloration and other types of microbial contamination such as molds...Goldshield 24 is an FDA listed product, which kill MRSA and other disease causing germs. MRSA is the third leading cause of mortality in the U.S., according to the Centers for Disease Control (CDC).

[Applications for this product](#) (combined with other SABR Guard techniques) include surfaces in offices, restrooms, breakrooms, walls, floors, ceilings, machinery, etc. Therefore, protect breathable or touchable areas, etc., against microbial contaminants including 'superbugs' that are resistant to antibiotics.

Basically, TREAT the entire interior of Your Facility... "Get your shield on ...Goldshield®"

When Your Factory has to be...Healthy, Clean, and Disinfected

JARDY Groups S.A.B.R. Guard Disinfectant Sanitizing Cleaning Applications.

We specialize in microbial remediation from indoor air and surfaces. This includes molds, mildew, bacteria, viruses, particulates, allergens, and violable organic compounds (VOCs) toxins.

Germs (microbes) and Bacteria are found everywhere...

Including YOUR FACILITY. The last thing you want when you're trying to Work is to get sick because of your FACILITIES indoor work environment.

Did you know that every 60 seconds, a working adult touches as many as 30 objects which may be contaminated by bacteria or viruses causing infectious disease?

According to a recent *American Industrial Hygiene Association* membership survey – the world's largest association of its kind, representing nearly 12,500 occupational and environmental health and safety professionals -- indoor air quality (IAQ) is the most serious issue facing today's American worker. Considering that IAQ is a constantly changing interaction of biological (microbes), chemical, and physical factors, it comes as no surprise that in numerous documented cases over the last several years, "sick building syndrome" has been cited as the primary culprit in the shutting down of workplaces for extensive cleanings and renovations, resulting in production and labor-hour losses well into the tens-of-millions of dollars.

You don't have to put up with these...**"Get your shield on ...Goldshield®"**

**Onsite Instantly Tested (15 seconds) to insure
Microbial contaminates are destroyed and
success of the application process is
documented for your records...**

Other Processes, Methods, and Options Tailored for You...include...

Agitation Cleaning, Steam Vapor, Gas-Phase and HEPA Filtration, UV/LED Radiation, Ozone Gas, Physical Containment, Mold Remediation, VOCs Removal, and last but not least Forensic Investigation...

Tailoring can also be according to budgets, time constraints, and concerning issues for treatments performances either Monthly, Quarterly, or Bi-Yearly...or just to get you started from a neutral sanitized point.
